

Session 5

Q1. Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following code:

```
102 CREATE TABLE influencers (  
103     influencer_id INT AUTO_INCREMENT PRIMARY KEY,  
104     name VARCHAR(100)  
105 );  
106  
107 CREATE TABLE posts (  
108     post_id INT AUTO_INCREMENT PRIMARY KEY,  
109     influencer_id INT,  
110     caption VARCHAR(255),  
111     FOREIGN KEY (influencer_id) REFERENCES influencers(influencer_id)  
112 );
```

The Result Grid shows the output of a query:

post_id	influencer_id	caption
1	1	New challenge video is out!
2	1	Thank you for your amazing support!
3	2	New video coming soon!
4	2	Behind the scenes of my latest video.
5	3	New episode of Dandora is coming!

The Action Output shows the execution of the following queries:

```
79 17:40:22 INSERT INTO influencers (name) VALUES ('McBeast'), ('CaryMinati'), ('Bhuvan Bam')  
79 17:40:27 INSERT INTO posts (influencer_id, caption) VALUES (1, 'New challenge video is out!'), (1, 'Thank you for your...')  
80 17:41:48 select * from influencers LIMIT 0, 1000  
81 17:41:59 select * from influencers LIMIT 0, 1000  
82 17:42:13 select * from posts LIMIT 0, 1000
```

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following code:

```
114 INSERT INTO influencers (name)  
115 VALUES  
116     ('McBeast'),  
117     ('CaryMinati'),  
118     ('Bhuvan Bam');  
119  
120 INSERT INTO posts (influencer_id, caption)  
121 VALUES  
122     (1, 'New challenge video is out!'),  
123     (1, 'Thank you for your amazing support!'),  
124     (2, 'New video coming soon!'),  
125     (2, 'Behind the scenes of my latest video.'),  
126     (3, 'New episode of Dandora is coming!'),  
127     (3, 'Some beautiful moments from today.');
```

The Result Grid shows the output of a query:

influencer_id	name
1	McBeast
2	CaryMinati
3	Bhuvan Bam

The Action Output shows the execution of the following queries:

```
79 17:40:27 INSERT INTO posts (influencer_id, caption) VALUES (1, 'New challenge video is out!'), (1, 'Thank you for your...')  
80 17:41:48 select * from influencers LIMIT 0, 1000  
81 17:41:59 select * from influencers LIMIT 0, 1000  
82 17:42:13 select * from posts LIMIT 0, 1000  
83 17:43:24 select * from influencers LIMIT 0, 1000
```

Q2. Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```

128 • select * from influencers;
129 • select * from posts;
130
131 • SELECT posts.caption, influencers.name
132 FROM posts
133 INNER JOIN influencers
134 ON posts.influencer_id = influencers.influencer_id;
135
136

```

The Result Grid shows the output of the query:

caption	name
New challenge video is out!	MrBeast
Thank you for your amazing support!	MrBeast
New video coming soon!	CarryMinati
Behind the scenes of my latest video.	CarryMinati
New episode of Dhondora is coming!	Bhuvan Bam

The Output pane shows the execution log with the following messages:

```

86 17:49:13 select p.name, c.caption from posts where influencers as p and posts as c inner join p.name-p.caption
87 17:52:34 select influencers.name, posts.caption from posts inner join influencers on influencers.influencer_id=posts.influencer_id
88 17:54:07 select posts.caption, influencers.name from posts inner join influencers on posts.influencer_id=influencers.influencer_id
89 17:54:41 select posts.caption, influencers.name from posts inner join influencers on posts.influencer_id=influencers.influencer_id
90 17:54:45 SELECT posts.caption, influencers.name FROM posts INNER JOIN influencers ON posts.influencer_id = influencers.influencer_id

```

Q3. Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column. Hint: Use IFNULL or COALESCE to handle NULL values in the result.

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```

135
136 • SELECT influencers.name,
137         COALESCE(posts.caption, 'No Posts') AS caption
138 FROM influencers
139 LEFT JOIN posts
140 ON influencers.influencer_id = posts.influencer_id;
141
142

```

The Result Grid shows the output of the query:

name	caption
MrBeast	Thank you for your amazing support!
MrBeast	New challenge video is out!
CarryMinati	Behind the scenes of my latest video.
CarryMinati	New video coming soon!
Bhuvan Bam	Some beautiful moments from today.
Bhuvan Bam	New episode of Dhondora is coming!

The Output pane shows the execution log with the following messages:

```

1 14:27:49 use InstaClone
2 14:27:54 SELECT influencers.name, COALESCE(posts.caption, 'No Posts') AS caption FROM influencers LEFT JOIN posts ON influencers.influencer_id = posts.influencer_id

```

Q4. Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown.

The screenshot shows the MySQL Workbench interface. The SQL editor contains the following query:

```
.41
.42 • SELECT posts.caption, influencers.name
.43 FROM influencers
.44 RIGHT JOIN posts
.45 ON influencers.influencer_id = posts.influencer_id;
.46
.47
```

The Results window displays the output of the query in a table format:

caption	name
New challenge video is out!	MrSeast
Thank you for your amazing support!	MrSeast
New video coming soon!	CarryMinati
Behind the scenes of my latest video.	CarryMinati
New episode of Dhondora is coming!	Bhuvan Bam
Some beautiful moments from today.	Bhuvan Bam

The Output window shows the execution log:

#	Time	Action	Message	Duration / Fetch
1	14:27:49	use InstaClone	0 row(s) affected	0.000 sec
2	14:27:54	SELECT influencers.name, COALESCE(posts.caption, 'No Posts') AS caption FROM influencers LEFT JOIN ...	6 row(s) returned	0.000 sec / 0.000 sec
3	14:30:02	SELECT posts.caption, influencers.name FROM influencers RIGHT JOIN posts ON influencers.influencer_id = p...	6 row(s) returned	0.000 sec / 0.000 sec
